

Data-Driven Instructional Planning for Significant Student Learning

Course Objectives:

- Analyze various points of data in order to understand student learning needs.
- Design scaffolded lessons that meet varying tiers of student learning needs.
- Select effective instructional behaviors that accelerate response to instruction.

Description:

The framework of this session is structured around the literature on instructional and assessment best practices. Participants will examine and practice using tools for assessment planning and data analysis. Participants will explore and practice using tools for planning and aligning tiered instruction, including logs for intervention instruction. Participants will discuss and troubleshoot organizational processes and leadership practices that enable teaching staff to implement these assessment and instructional tools. This session will include lecture, discussion, hands-on practice with feedback.

Cost for a 2-day workshop is \$4200. Cost for a 3-day workshop is \$6300. Travel is an additional cost. Cost for participant materials is \$25. per person.
